LAMP RISERS FOR SHIP DISPLAY PEDESTALS

Mike's scale modeling ship books and articles all use these lathe turned solid brass lamp risers for ship pedestals, however they are becoming increasingly hard to find at local stores. In Mike's two books he refers to them as "lamp finials", but technically they are called "lamp risers".

They can be purchased on AMAZON, but they are sold in packs of 2 or 4 and they are a bit on the expensive side. On **ebay** there is a company that sells these lamp risers in lots of 10. In the ebay search box type "lamp riser" and look for the quantity of "10" on the item descriptions.

The sellers name is "**Lamppartsguy**" and the company is located in Texas. The company has different lengths of lamp risers and they will combine shipping costs if you order more than 1 set. They are prompt and I received my order via the US Postal Service within a week of placing the order.

NOTE: The screw is not supplied by the seller "**Lamppartsguy**".
