

**HO SCALE IHC CHEYENNE 650 TON COAL BUNKER
MODEL BY MIKE ASHEY**

IHC models are plastic craftsman kits. There are no positioning tabs, the fit is below average and some of the plastic parts are a bit soft. There are also a lot of dimples on the framing that need to be covered. However, with basic construction techniques, this kit can be built into an outstanding model. The dimples were covered with Evergreen plastic strips of various sizes and the model was painted with Testors enamel paints using an airbrush. The weathering was achieved using pastel pencil dust.
